SUMMARY

Backend Software Engineer with experience building scalable microservices using Spring Boot and FastAPI, currently working on enterprise retail systems at Cognizant (Boots UK). Skilled in designing high-performance APIs, automation frameworks, and AI-integrated systems, with proven impact in reducing latency and improving system reliability. Strong focus on backend architecture, distributed systems, and production-grade engineering.

SKILLS

- Languages: Java, Python, SQL, JavaScript
- Backend: Spring Boot, Flask, FastAPI, Node.js
- Databases & Caching: MySQL, MongoDB, Redis
- Cloud & DevOps: Azure, Docker, Jenkins, GitHub Actions, CI/CD
- Tools & Automation: REST Assured, Selenium, TestNG, Postman, Git, Maven, JIRA

EXPERIENCE

Programmer Analyst – Cognizant | Client: Boots UK (E-commerce Platform)

May 2025 – Present

- Engineered enterprise e-commerce solutions across Spring Boot, SFCC, PWA, APIs, and Thor for Web, Mobile, and Tablet workflows.
- Designed and developed a reusable SFCC Promotion Validation Platform using Java, Spring Boot, Cucumber, REST Assured, SQL, HTML, CSS, and JavaScript.
- Implemented promotion detection, strategy-based execution, expected-vs-actual validation, and Allure/HTML reporting, reducing validation time from ~1–1.5 hours to 5–10 minutes.
- Designed KM Portal and LoggerAI using Spring Boot and AI for learning workflow automation, scoring, tracking, failure detection, and debugging.
- Act as the offshore POC, coordinating requirements, development, validations, defect tracking, and cross-team communication. Engineered LoggerAI, an AI-powered log analyzer for failure detection and debugging, and contributed to GitHub Copilot POC initiatives by integrating AI logger capabilities with automation frameworks and Azure DevOps CI/CD.

AWARDS & RECOGNITION

- **Trend Setter** – Recognized for developing the SFCC Promotion Validation Tool, reducing validation time from ~1 hour to 5–10 minutes.
- **The Energy and Optimism** – Cognizant recognition for valuable contribution and outstanding performance.

PROJECTS

J.A.R.V.I.S — User Platform (FastAPI / Python) [GITHUB](#)

- Built an AI-driven assistant platform combining rule-based execution with LLM fallback to ensure reliable and deterministic responses.
- Designed a persistent memory engine (MongoDB) enabling context-aware responses and workspace-level intelligence.
- Engineered WebSocket-based real-time multi-workspace collaboration with @mention-triggered AI activation and event-driven synchronization.
- Implemented production-grade WebRTC voice and video calling with real-time signaling and synchronized cross-client state management.
- Developed a multi-window browser-based interface with task management and session isolation using React.
- Tech: React, Vite, FastAPI, Python, MongoDB, WebSocket, WebRTC, LLM, Gemini AI.

J.A.R.V.I.S — Admin & Super Admin Platform (Spring Boot / Java) [GITHUB](#)

- Designed enterprise-grade RBAC system (Guest/User/Admin/Super Admin) with JWT authentication and Bcrypt hashing.
- Built centralized user management with role promotion/demotion and secure password reset workflows.
- Implemented command-level access governance enabling admin-controlled AI/system command permissions.
- Developed full support ticket lifecycle management (reply/close/reopen) with real-time synchronization between user and admin platforms.
- Tech: Spring Boot, React, MongoDB, JWT

Food Finder - User Platform (Flask / python) [GITHUB](#)

- Built a **read-optimized user platform** with **Redis-cached fuzzy search**, AI fallback (Gemini), real-time search, and sub-50ms responses.
- Implemented **secure authentication and session-based personalization**, including a persistent **Liked/Disliked recipes system** using MySQL.

Food Finder - Admin Panel (Spring Boot / Java) [GITHUB](#)

- Designed Flask + Spring Boot microservices with Redis caching, AI-enhanced search, secure authentication, and admin analytics on shared MySQL.

AllureIQ Framework v3.2.6 — AI-Powered Unified Test Intelligence Platform [GITHUB](#) | [Test Report -1](#) | [Test Report -2](#)

- Built an AI-driven automation and reporting platform using Spring Boot, REST Assured, TestNG, Allure, and MongoDB, generating AI summaries, detecting recurring failures, and suggesting automated fixes.
- Implemented hybrid fuzzy search with MongoDB Atlas and local caching, integrated GitHub Actions CI/CD, and published the framework as a reusable Maven package.

EDUCATION

- Bachelor of Technology in Information Technology | Matrusri Engineering College, Saidabad, Hyderabad | 2020 - 2024 | CGPA: 7.3
